AIS keen to share Thai Mobile 3G space.

August 11th, 2008

Advanced Info Service is eager to share part of Thai Mobile's 1900 Megahertz bandwidth to upgrade third generation (3G) mobile phone service under a concession agreement with TOT Plc.

The country's largest mobile operator believes it can help ensure TOT's 3G plan has a quick liftoff because AIS has the potential to deploy 3G infrastructure faster given its existing support functions for mobile services.
